

MINERVA CryoCell P&ID v3 — Default Views Guide

Each v3 SVG embeds five named **default-view presets** as machine-readable metadata (`<metadata>` → `minerva:defaultViews`). A view is simply a list of which layers are visible, letting a reviewer declutter the drawing to a single purpose with one toggle set. The presets are documented here and can be applied in Inkscape (Layers panel) or by a small script that flips each layer's `display` attribute.

How the presets are stored

```
<metadata id="minerva-pid-meta">
  <minerva:defaultViews xmlns:minerva="https://sckcen.be/minerva/pid">
    <view name="DEFAULT_FULL">
      <layer name="00_Background_TitleBlock" visible="true"/>
      ...
    </view>
    ...
  </minerva:defaultViews>
</metadata>
```

The five views

View	Purpose	What is shown
DEFAULT_FULL	Complete drawing for normal review	All layers except the legend overlay (legend is opt-in)
DEFAULT_PROCESS	Process / piping focus	Background, scope, structures, all piping (primary+branch+secondary+outside), valves, sensors, tags
DEFAULT_CONTROL	Instrumentation & control focus	Background, scope, sensors, DIS/control, the three signal layers, out-of-scope services, tags
DEFAULT_MAIN	Main-line schematic (declutter)	Background, scope, equipment, only the three PRIMARY cryo trunks + secondary water + valves + tags
PRINT_MONO	Black-and-white plotting	All layers except the legend overlay; use the <code>_MONO</code> file variant

Applying a view in Inkscape

1. Open the SVG → **Object ▶ Layers...** (Shift+Ctrl+L).
2. Toggle the eye icon for each layer per the table above, **or**
3. Run the helper below to write a view-specific copy.

```
import re, sys
svg = open(sys.argv[1]).read()
VISIBLE = { # paste the layer list for the chosen view
    "00_Background_TitleBlock", "01_Scope_Boundaries", "03_Equipment_Vessels",
    "04A_Piping_PRIMARY_40K", "05A_Piping_PRIMARY_4p5K", "06A_Piping_PRIMARY_2K",
    "07_Piping_SECONDARY_Water", "09_Valves_Mechanical", "15_Tags_Instruments",
}
def repl(m):
    name = m.group(1)
    disp = "inline" if name in VISIBLE else "none"
    return f'id="{name}" inkscape:label="{name}" style="display:{disp}"'
out = re.sub(r'id="([^\"]+)" inkscape:label="([^\"]+)" style="display:([^\"]+)"', repl, svg)
open(sys.argv[1].replace(".svg", "_VIEW.svg"), "w").write(out)
```

The toggleable legend & notes

- **16_Legend_TOGGLEABLE** is shipped **hidden** so the drawing area is maximised. Turn it on for hand-off prints or when sharing with new reviewers.
- **17_Notes_TOGGLEABLE** (buffer volumes, scope hand-over notes, control callouts) is shipped **visible** but can be hidden for a clean schematic.
