

Text Standardization Report — Wave W003

Phase 3

Project: MINERVA CryoCell / QCELL & RFCELL P&ID

Wave: W003 (Layer Hierarchy), Phase 3

Target font: Consolas, 'DejaVu Sans Mono', monospace

1. Summary

Metric	Value
Total text nodes analysed	533
Distinct raw font sizes found	20
Distinct font families found	5
Target font (standardised)	Consolas, 'DejaVu Sans Mono', monospace
Size tiers defined	4

All 533 text nodes use `font-weight: normal`. The source drawing mixes inconsistent fonts and sizes; standardization collapses these onto a single monospace stack and four semantic size tiers (mm-based).

2. Current state (before standardization)

Font families

Family	Count
(inherited / none)	313
sans-serif	189
Arial	21
'Times New Roman'	8
'Agency FB'	2

Most common raw sizes

Raw size	Count
7.5px	141
12px	100
5.13131px	89
3.84848px	42
7.69697px	24
6.41414px	23
14.11111px	21
(other 13 sizes)	93

3. Target size tiers (mm)

Tier	Size (mm)	Assigned nodes	Sample tokens
major_header	3.0	148	Q1 , EH514TT514 , MP-011ARC-014 , ARC-013 , CPLR.1
instrument_tag	2.2	157	TT513 , TT523 , TT535 , TT536 , TT546
annotation	1.8	211	x- , x+ (flow/offset annotations)
segment_label_vertical	2.5	17	AK , XM , AL2 , AL1 , AL
Total assigned		533	

4. Notes

- Vertical segment labels (17) are detected via transform-rotation angle and routed to their own tier (2.5 mm) and to layer 06_SegmentNames_Vertical_Black .
- Standardization is recorded as a model (tier assignment per node); the live re-styling is applied in the layered atlas via the lyr-* class system.
- Machine-readable output: data/model/text_standardization.json .
- Engine: src/abacus_svg_pid/build_w003_w004.py (Phase 3).
